

Growth and Development Economics for Research Students (EC8510)

2024-25

Reading List. Subject to (minor) Changes.

Topics and Readings

The course will follow approximately the order of topics listed below. Within each topic papers are listed in alphabetical order. **You are not expected to read everything.** My slides will provide a good basis for the course. The references below can be considered more of a reference list to be used throughout your PhD (and beyond). If there is something you do not understand you can look at the papers in more depth. That being said I think that a good strategy would be to read the abstract, introduction, and conclusion of each paper (this should be manageable and give you a good overview). Papers to be included in your summary for each topic will need to be read and thought about in detail. Readings may be added (or subtracted) during the course, and the order of topics may change.

* = readings that I think you should all definitely read

General References

Before we get into reading related to “Growth and Development Economics”, there are several books I would encourage you to read and reference regularly during your PhD. These are:

- “How to Read a Book: The Classical Guide to Intelligent Reading”. Even if you just read the first few chapters it will serve you well and save you a lot of time.
- “Doing Economics – What You Should Have Learned in Grad School but Didn’t”. Unlocking the hidden curriculum.
- “First You Write a Sentence: The Elements of Reading, Writing... and Life.” Communicating clearly and effectively is essential and we’re all really bad at it. This book has been one of the more helpful books on writing that I’ve read over the years. It doesn’t matter good you are as a professional researcher if you are not also a professional writer. Start making this investment now.

An excellent non-technical introduction to a lot of recent research using randomized control trials is Abhijit Banerjee and Esther Duflo’s *Poor Economics*. Debraj Ray’s *Development Economics* is an undergraduate textbook that provides an excellent introduction to topics in development economics.

See also the symposium on The Agenda for Development Economics – *Journal of Economic Perspectives* Volume 24, Number 3, Summer 2010: Articles by Deaton, Acemoglu, Ray, Rodrik, and Rosenzweig.

Two articles that capture the debate on the method of randomized control trials in development economics are: “Instruments, Randomization, and Learning about Development?” by Angus Deaton (2010), *Journal of Economic Literature* and “The Experimental Approach to Development Economics” by Abhijit V. Banerjee and Esther Duflo, *Annual Review of Economics* (2009). Dani

Rodrik's "*The New Development Economics: We Shall Experiment, But How Shall We Learn?*" is also worth a read. A more recent methodological paper is by Angus Deaton and Nancy Cartwright called "Understanding and Misunderstanding Randomized Controlled Trials", *NBER Working Paper W22595*.

In terms of unifying our thinking around micro and macro approaches to development, Abhijit Banerjee's paper "Big answers for big questions: the presumption of growth policy" gives a good insight into how some people in the RCT community feel about macro-development. Pete Klenow's discussion is a good defense of macro development – http://klenow.com/Klenow_Discussion_of_Banerjee_Text.pdf

Recently the STEG group at CEPR produced a series of "Pathfinding Papers" providing overviews of the literature and new directions <https://steg.cepr.org/publications/steg-pathfinding-papers>.

Useful journals

Journal of Human Resources

Journal of Public Economics

Journal of Labor Economics

Economic Development and Cultural Change

World Bank Economic Review

Empirical Preliminaries:

Popper, K.* (1953), *Science: Conjectures and Refutations*. Lecture given at Peterhouse, Cambridge.

It's good to remind ourselves what science means. Read this.

Holland, P.* (1986), "Statistics and Causal Inference." *Journal of the American Statistical Association*

Everyone even thinking about empirical work should read this paper. And perhaps regularly.

*Cunningham, S. (2018), *Causal Inference: The Mixtape*

FREE! a great overview of all things causal inference for economists

Angrist, J. and S. Pischke (2009)*, *Mostly Harmless Econometrics: An Empiricist's Companion*, Princeton University Press, Princeton.

This book is a wonderful, intuitive guide to empirical work. Buy it and read often.

Angrist, J.D., and A.B. Krueger (1999) “Empirical strategies in labor economics.” *Handbook of Labor Economics*

Angrist, J.D., and A.B. Krueger (2001) “Instrumental variables and the search for identification: From supply and demand to natural experiments.”

Bertrand, M, E Duflo, and S Mullainathan (2004) “How Much Should We Trust Differences-in-Differences Estimates?” *Quarterly Journal of Economics*

Cameron, A.C., and P.K. Trivedi (2009) *Microeconometrics using stata.*, Stata Press.

This is the Stata companion to their textbook. It is excellent and I cannot recommend it highly enough for folks wanting to do applied work.

Duflo, E. (2002). “Empirical Methods.” *MIT Mimeo.*

Imbens, G. and J.M. Wooldridge, (2009)* “Recent Developments in the Econometrics of Program Evaluation.” *Journal of Economic Literature.*

Topic 1: Measuring Growth and Development

We discuss some concepts relating to development. We then look at some stylized facts, both at the aggregate level as well as from household surveys that tell us how the poor live.

*Ghatak, M. (2017) “Measures of Development: Concepts, Causality, and Context”, *Mimeo*

Jones and Klenow (2016) “Beyond GDP? Welfare across Countries and Time”, *American Economic Review*
